

3

Most Common FIRE SAFETY HAZARDS ACROSS CAMPUS

1 | Extension cords should only be for temporary use, not for prolonged periods.

2 | Outlet strips should only be plugged directly into a wall outlet, not into another outlet strip.

3 | Fire doors should remain closed, not propped open for any length of time.*

The campus received a corrective action notice for these violations. To prevent these hazards moving forward, we need full cooperation by the entire campus community.

**Fire doors typically have an automatic closer.*
